RSL X Type Shoes

X Type

Positioning in the court and also the speed at which you are in position decides one wins or loses a game. In RSL, we understand the importance of speed and agility.

They say "Be at the right place at the right time", but with RSL X Type shoes we say "Be at ALL places AHEAD of time"

Strong Heel Brace

3 Dimensional support wraps perfectly around your heel to provide maximum support and protection.

Landing Force Cushion (LFC)

Upon landing, impact absorption cushion provides protection against impact injuries and to provide comfort without losing control.

Torsion Carbon Fibre Support Plate

A strong midsection will reduce tiredness and provide more support for the constant movement from front to back, heel to toe movement during game play. The new Carbon Fibre support plate supports the midsection with a functional shape that supports the front to back motion and also anti-twist movement.

Driving Force Cushion (DFC)

The driving force cushion is thinner and slightly denser than LFC to provide more solid base for push off, stopping action, change of direction. So the control is the key but comfort must also be considered.

Soft Supportive Sole

New soft and light weight sole provides a strong platform to combine all the other functions together. Flexibility provides it with mobility, the light weight construction maximise action speed and the strong platform provides support and control.

Super Suction Grip

Gives you maximum grip when you need it the most during stopping and defence.

Strategic Directional Grip

Directional Grip divides the sole into section and applies the right type of grip pattern to maximise grip to allowing you to have more confidence, push off quicker, change direction quicker and stop quicker.
